DETAILED ACTION

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas Galgano on May 21, 2008.

The application has been amended as follows:

Claims 8 and 10 have been amended to correct an antecedent basis issue.

8. A film thickness measuring apparatus using a fast Fourier transformation comprising:

- a light source for projecting a light on the surface of a thin film sample;
- a spectrograph for splitting the light reflected from the sample according to each wavelength;
- an optical measuring device array for measuring intensities of each wavelength of the split reflected light;
- a transformation unit for converting a signal of the measured intensities of each wavelength of the split reflected light into a digital signal data; and
- a computation unit for computing a thickness of the thin film based on the number of oscillations obtained by a fast Fourier transformation in which the digital signal data converted by the transformation unit is based on [the] a refraction index dispersion.

10. A method for measurement of film thickness using a fast Fourier transformation comprising the steps of:

- projecting a light on the surface of a thin film sample;
- splitting the light reflected from the sample according to each wavelength;
- measuring intensities of each wavelength of the split reflected light;

converting a signal of the measured intensities of each wavelength of the split reflected light into digital signal data; and

computing a thickness of the thin film based on the number of oscillations of a reflection spectrum obtained by a fast Fourier transformation in which the digital signal data transformed by a transformation unit is based on [the] a refraction index dispersion.

Allowable Subject Matter

Claims 8-11 are allowed in view of the prior art.

The following is an examiner's statement of reasons for allowance:

As to claims 8 and 10, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a film thickness measuring apparatus using a fast Fourier transformation (claim 8) and a corresponding method for measurement of film thickness using a fast Fourier transformation (claim 10), the apparatus and method comprising, among other essential features, a computation unit that computes a thickness of the thin film being measured based on the number of oscillations obtained by a fast Fourier transformation in which the digital signal data operated upon by the transformation unit is based on a refraction index dispersion, in combination with the rest of the limitations of the above claims.

With further regard to the above, please see the applicants' arguments dated March 19, 2008 in response to the previous Office action of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL A. LYONS whose telephone number is (571)272-2420. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory J. Toatley can be reached on 571-272-2800 ext. 77. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
